

Node.JS – HW – Access REST API

There is a json file (create it!) with movies names as follows:

```
movies.json > ...
{
  "movies": [
    "Under the Dome",
    "Person of Interest",
    "Bitten",
    "Arrow",
    "True Detective"
  ]
}
```

You have a rest api service at <http://api.tvmaze.com/shows> with movies data

Create a function in utils module that finds the movies by their names pulled from the json file and overrides the json file the following movies data :

```
{
  "movies": [
    {"name": "Under the Dome", "premiered": "2013-06-24"},
    {"name": "Person of Interest", "premiered": "2011-09-22"},
    {"name": "Bitten", "premiered": "2014-01-11"},
    {"name": "Arrow", "premiered": "2012-10-10"}
  ]
}
```
